

Simpson Adds *Jr. Racer Turbo Booster* To Child Safety Seat Line

All 50 states In the United States of America have child restraint laws. Bottom line - All states require children to be restrained in a child seat at least until age 4.

U.S. laws are governed by Federal Motor Vehicle Safety Standard 213. Each year hundreds of young children are killed in car crashes and thousands more are injured seriously enough to go to the emergency room. Using car safety seats and seat belts correctly is the best way to prevent the fear happening to your child.

The Car Seat for Every Parent

Because We Know There Are Some Things You Love More Than Racing

Jr. Racer Booster

- **Seat pad features a racing inspired flame pattern with Simpson “S”-logo and “Jr. Racer” logo**
- **E.P.S. energy absorbing foam**
- **Padded arm rests for extra comfort**
- **One-hand adjustable head support grow with your child**
- **Open loop belt guide for easy installation and added comfort**
- **Deep side wings support your child while napping**
- **Easily converts to a backless booster seat**
- **Hide-away cup and snack holders for when you are on the go**

Booster seats

Your child should stay in a car safety seat with a harness as long as possible and then ride in a belt-positioning booster seat. You can tell when your child is ready for a booster seat when one of the following is true:

- He or she reaches the top weight or height allowed for the seat.
- Child’s shoulders are above the harness slots.
- Child’s ears have reached the top of the seat.

Booster seats are designed to raise your child so that the lap/shoulder belt fits properly. This means the lap belt lies low across your child's thighs and the shoulder belt crosses the middle of your child's chest and shoulder. Correct belt fit helps protect the stomach, spine, and head from injury. Both high-backed and backless models are available. Booster seats should be used until your child can correctly fit in a lap/shoulder seat belt.

Important Safety Rules

- **Always use a car safety seat, starting with your baby's first ride home from the hospital.**
- **Never place a child in a rear-facing car safety seat in the front seat of a vehicle that has an airbag.**
- **The safest place for all children to ride is in the back seat.**
- **Set a good example-always wear your seat belt. Help your child form a lifelong habit of buckling up.**
- **Remember that each car safety seat is different. Read and keep the instructions that came with your seat.**
- **Read the owner's manual that came with your car on how to correctly install car safety seats.**

Read and Follow Manufacturer's Instructions

Before buying a car safety seat, check the manufacturer's instructions for important safety information about proper fitting and use.

If you do not have the manufacturer's instructions for your car safety seat, write or call the company's customer service department. They will ask you for the model number, name of seat, and date of manufacture. The manufacturer's address and phone number are on the label on the seat.
